more possibilities.™

# N-Stor™ Hydrogen Canisters

The N-Stor canisters supply the hydrogen fuel necessary to power Jadoo Power fuel cell products. The N-Stor canisters contains a metal hydride powder that absorbs hydrogen and releases it upon demand from the fuel canister. N-Stors are shipped filled and ready for use with approved Jadoo Power fuel cell products. The N-Stor operates at low pressure, and incorporates safety features to prevent the inadvertent release of hydrogen.

## Long Continuous Runtime

More than 11 hours of runtime with just one N-Stor cartridge.

## Hot-Swap

The hot-swap feature extends runtime by making it possible to change cartridges without interrupting power to your application.

## Predictable Power

Get the same runtime everytime without the memory loss or self-discharge many batteries have.

## On Board Intelligence

Accurate state-of-fill information display on the canister.

## DOT (Department of Transportation)

Approved for Air Cargo Shipment

## Environmentally Sound—Zero GHG

The byproducts of hydrogen fuel cell power generation are heat and water in the form of electricity and water vapor. No pollutants are discharged into the atmosphere.

*At Jadoo Power we can customize any product to meet your needs. Contact our experts at our toll free number 888-523-6648.*

## PRODUCT SPECIFICATIONS:

### N-Stor 360™

- Capacity: 360 W-h / 30 A-h
- Weight: 5.1 lbs. (2.2 kg.)
- Size: 2.5" diameter x 10.5" h

### N-Stor 130™

- Capacity: 130 W-h
- Weight: 2 lbs. (1.0 kg.)
- Size: 2.5" diameter x 4.5" h

N-Stor™  
Fuel Canisters
